SRF ID : 1931300393833

| Test Name | Results |
|-----------|---------|
|-----------|---------|

SARS-CoV-2 (COVID-19) QUALITATIVE REAL TIME RT-PCR *
(Real Time PCR)

| | |
|------------------|---|
| Type of Specimen | Nasopharyngeal / Oropharyngeal Swabs |
| Result | Negative |

Condition of specimen received / Quality on arrival: Good Quality Specimen / In Cold Chain

Note

1. ICMR Registration number for Covid -19 is DLPLL001. Please scan the QR code given at end of this report to check the authenticity of the report.
2. Negative result does not rule out the possibility of Covid-19 infection. Presence of inhibitors, mutations & insufficient RNA specific to SARS-CoV-2 can influence the test result. Kindly correlate the results with clinical findings. A negative result in a single upper respiratory tract sample does not rule out SARS-CoV-2 infection. Hence in such cases a repeat sample should be sent. Lower respiratory tract samples like Sputum, BAL, ET aspirate are appropriate samples especially in severe and progressive lung disease.
3. Covid-19 Test conducted as per kits approved by ICMR / CE-IVD / USFDA.
4. Kindly consult referring Physician / Authorized hospitals for appropriate follow up.
5. This is a qualitative test. The Ct values do not provide a measure of viral load due to inherent variability in sampling and kits. According to ICMR guidelines Ct values should not be used to gauge the severity of the disease.
<https://www.icmr.gov.in/pdf/covid/techdoc/Advisory_on_correlation_of_COVID_severity_with_Ct_values.pdf>
6. It is recommended that RTPCR test not be repeated in any individual who has tested positive once either by RAT or RTPCR (ICMR guidelines).
7. No testing is required for COVID-19 recovered individuals at the time of hospital discharge in accordance with the discharge policy of MoH&FW ([https:// www.mohfw.gov.in/](https://www.mohfw.gov.in/) <<http://www.mohfw.gov.in/> pdf/ ReviseddischargePolicyforCOV/019.pdf>>).

Comments

Coronaviruses (CoV) are a large family of viruses that cause illness ranging from the common cold to more

severe diseases such as Middle East Respiratory Syndrome (MERS-CoV) and Severe Acute Respiratory Syndrome (SARS-CoV). Coronavirus disease (COVID-19) is a new strain that was discovered in 2019 and has not been previously identified in humans. Common signs of infection include respiratory symptoms, fever, cough, shortness of breath and breathing difficulties. In more severe cases, infection can cause pneumonia, severe acute respiratory syndrome and kidney failure.

Note: The results relate only to the specimens tested and should be correlated with clinical findings.

Interpretation guidance:

- Please ensure and maintain the confidentiality of the test report.
- Testing of referred clinical specimens were considered on the basis of request /referral received from/ through the State Surveillance Officer (SSO) of concerned State Integrated disease Surveillance Programme(IDSP) / any other health facility affirming requirements of the case definition/s.
- A single negative test result, particularly if this is from an upper respiratory tract specimen, doesn't exclude infection.
- Repeat sampling and testing of lower respiratory specimen is strongly recommended for severe or progressive disease. The repeat specimens can be considered after a gap of 2 to 4 days after the collection of first specimen for additional testing if required.
- A positive alternate pathogen doesn't necessarily rule out either, as little is yet known about the role of coinfections. Testing of non-viral agent has not been undertaken.
- Please note that these results are not to be used for any thesis or presentations or for Publications in any Journal without prior permission of Director General, ICMR.
